

Brainstorm & Idea Prioritization Template

Script-Controlled ACL District Record Access in ServiceNow

Step 1: Problem Statement

How can we securely restrict access to district records in ServiceNow so that only authorized users can view, create, edit, or delete records based on assigned roles and district values?

Step 2: Brainstorming Ideas

1. Role-Based Access Control (RBAC)
2. Script-Controlled ACL
3. District-Based Record Filtering
4. Custom Roles for Read/Create/Write/Delete
5. Record-Level Security
6. Dynamic Permission Validation
7. Audit Logs and Monitoring
8. Automated District Assignment
9. Unauthorized Access Prevention
10. Admin Override Access

Step 3: Idea Grouping

- Access Control: RBAC, Script-Controlled ACL, Custom Roles
- Security: Record-Level Security, Unauthorized Access Prevention
- Automation: Dynamic Permission Validation, Automated District Assignment
- Monitoring: Audit Logs and Monitoring

Step 4: Idea Prioritization

High Importance & High Feasibility:

- Script-Controlled ACL
- District-Based Record Filtering
- Role-Based Access Control

Final Selected Idea

Script-Controlled ACL with District-Based Access Control. This solution ensures that only authorized users can access district records while administrators retain full control.
